“Today’s markets are getting increasingly global and the competition is fierce. Having foreign experience listed on your resume (plus improved foreign language skills if studying at a non-English speaking institution) will give you a strong advantage over others when applying for a job, especially if your aspirations are to hold a management-level position. Studying abroad will not make you a better programmer but it will give you an understanding of how to keep the US competitive in an increasingly global economy.”

Professor Lubomir Bic
Information & Computer Science
