FUNCTIONAL ANATOMY & GENETICS AT UNIVERSITY OF GLASGOW

New summer program for Pre-Med/Pre-Health students!

Overview:
The program is divided into two, four-week sessions. Students enroll in one course during each session. The University of Glasgow is one of the leading schools in the UK for international research, undergraduate, and postgraduate degrees. It ranks in the world top 50 for Life Sciences.

Functional Anatomy:
The 4-week course will:
- Introduce the use of medical terminology, and
- The principles of radiology and identification of structures,
- Develop an understanding of regional anatomy,
- Clinical application of anatomical knowledge, and
- Strong basic techniques in dissection.
Course assessment is modelled after USMLE-style questions.

Genetics (Bio 97):
The 4-week course will:
- Describe the structure, organization, and replication of DNA,
- Present the properties of genes and their inheritance,
- Discuss the nature of human genetic disease,
- Describe strategies underlying the genome projects, and
- Use bioinformatic tools to analyze DNA.
